Anshul Ramprasad

AI Product & Agent Strategist | Conversational AI, Evaluation & Enterprise Products

anshulramprasad@gmail.com | +60 12-298-1192 | Kuala Lumpur, Malaysia | linkedin.com/anshulramprasad

SUMMARY

Applied AI product and agent strategist who owns the agent development lifecycle from enterprise discovery and workflow design through prototyping, technical delivery, evaluation, launch, and iteration. Hands-on experience building customer-facing AI systems using conversational AI, agents, RAG, tool use, model routing, prompt engineering, and evaluation to create business value and exceptional customer experiences. Trusted to work with enterprise leaders, developers, designers, sales teams, and stakeholders to own product direction and deliver measurable outcomes.

WORK EXPERIENCE

TWIMBIT MALAYSIA Sep 2023 - Present

Lead Product Manager, AI & Growth | Previously Consultant & Research Analyst *Kuala Lumpur, Malaysia*

- Lead, owned product end-to-end, and shipped for Rae, an agentic sales-enablement platform for CelcomDigi (Telco) with 350+ enterprise business users with 15 live features. Rae was linked to RM 82M (USD 20M) in TCV generated over 3 years
  - Improved Rae's response engine using analytics from approximately 5,000 conversations: introduced automatic routing across internal RAG, web search, and general responses; strengthened prompts, source use, uncertainty handling, and response quality leading to better user experience and improved CSAT/NPS metrics
  - Independently created and owned a 104-case multilingual evaluation suite grounded in approximately 4,000 real conversations across English, Malay, and Chinese; used LLM-assisted scoring and human review to diagnose failures, compare changes, prevent regressions, and shape the platform roadmap leading to increased platform adoption and better user experience
  - Built SQL/PostgreSQL pipelines and Metabase dashboards for MAU, retention, funnels, and conversation cohorts; used adoption evidence and enablement programs to recover active usage from 15 to 175 users within a 2-month window.
  - Led multiple structured product-discovery sessions through Rae Wednesdays with frontline account managers across financial services, public sector, oil and gas, property, SME, and partner verticals. Reviewed requirements through product, engineering, design, user, and business lenses to reduce ambiguity and prevent unnecessary scope.
  - Rapidly prototyped product ideas with AI tools to improve communication, share ideas earlier, test assumptions, and validate concepts before committing engineering effort.
  - Lead user/customer discovery, requirements, roadmap, analytics, launches, executive reviews & stakeholder management, and adoption activities end to end
- Owned Rae Engage end-to-end: a customer-facing AI agent on CelcomDigi's business website pages that guides visitors, answers initial product questions, features clean widgets and UI for user experience, distinguishes sales intent from complaints and general enquiries, qualifies prospects, and routes actionable leads into Salesforce. Replaced a pre-existing form leading to increases in actual qualified leads and customers routed to appropriate channels.
  - Designed conversation flows, edge cases, error handling, and translated requirements across enterprise business, sales, CX, product, brand/marketing, engineering, and privacy into a focused pilot, UAT plan, success metrics, approved-knowledge boundaries, customer-data handling, guardrails, and human handoff.
- Designed and operationalized 20+ purpose-built assistants and agents for internal use with explicit system instructions, retrieval/tool boundaries, validation, and human checkpoints.
- Helped scale analyst content output from approximately 150 to 400+ per year while maintaining a 16-hour SLA per piece, strict review and content validation, and adherence to content requirements. This represents an approximate 80-95% reduction in hands-on production time per output.
- Led biweekly client reviews and AI enablement programs for Twimbit and CelcomDigi, translating complex AI behavior into practical guidance on model selection, safe prompting, use-case design, evaluation, and adoption.
- Architected and owned the larger product analytics strategy across Twimbit's product arm and standardized metrics, reporting, and analysis practices across product surfaces leading to better visibility of user behavior informing roadmaps and development direction

H ROSEN ENGINEERING MALAYSIA Sep 2022 - Apr 2023

Systems Implementation & Evaluations Intern *Kuala Lumpur, Malaysia*

- Analyzed ESG and macroeconomic datasets, automated research-chart generation with Python, and helped build an internal Python analytics course for financial analysts.

THE SEACEN CENTRE MALAYSIA Apr 2022 - Jul 2022

Data Processing & Analytics Intern *Kuala Lumpur, Malaysia*

- Automated ETL and reporting workflows to support faster international client delivery.

PROJECTS & ADDITIONAL EXPERIENCE

Sage | Solo-built Lovable Vibeathon May 2026 project:

- Solo-built a voice-first personal health assistant for chronic-care and recovery users, combining voice logging, check-ins, reminders, AI visit capture, document intelligence, and a longitudinal timeline with Lovable, Supabase, Claude API, and Web Speech API.
- Login here: https://sage-personal-health.lovable.app/ | username: ananya@demo.heatlh password: Demo1234!

OpenClaw | Open-sourced build + thought leadership

- Built and operated persistent-agent workflows for a personal knowledge base, scheduled automations, and Git auto-sync; open-sourced the complete repo and documented practical lessons for other builders.

Real Estate Marketing | Side project

- Automated marketing for individual real estate agents using AI tools and workflows, reducing production time by ~80% while increasing content output on demand.

EDUCATION

Taylor's University, Kuala Lumpur, Malaysia Aug 2019 - Dec 2022
BCompSci (Hons) - Data Science and Artificial Intelligence | CGPA 3.4 | Dean's List

SKILLS

Enterprise AI: Conversational AI, AI agents, agentic workflows, RAG, conversation design, prompt engineering, model routing, tool use, evaluation, LLM-as-judge, guardrails, PII boundaries, human handoff, multilingual AI
Product & Commercial: Customer discovery, workflow mapping, stakeholder interviews, product strategy, roadmaps, PRDs, user stories, prototyping, UAT, customer pilots, adoption, enablement, lead qualification, lead scoring, Salesforce integration
Build & Data: Python, SQL, PostgreSQL, Metabase, APIs, FastAPI, Weaviate, retrieval configuration, tool boundaries, analytics instrumentation, funnel analysis, conversation analytics, AI-assisted prototyping
Core Strengths: Customer-facing AI delivery, applied AI product management, technical translation, cross-functional leadership, executive communication, enterprise stakeholder alignment, ambiguity management, telco CX, enterprise SaaS, AI enablement
Tools: Agentic coding harnesses (claude code, codex, opencode, kimicode), Agent harnesses (Openclaw, Hermes, etc), Lovable, Alloy,
